## Editing in AquaTwin

You can use the AquaTwin editing tools for basic editing tasks, such as adding, deleting, and moving asset geometry within your projects. We recommend using AquaTwin for these simple tasks due to its user-friendly interface and efficient functionality (Figure 2).

Here is a link to the AquaTwin online help guide for more information: [Manually Editing Assets in AquaTwin](#).

Figure 2: AquaTwin editing tools.

## Why would I want to use ArcGIS editing tools?

For more complex or batch editing tasks that cannot be accomplished with AquaTwin tools, you can use ArcGIS editing tools. ArcGIS provides advanced functionalities that are designed to handle intricate and large-scale modifications efficiently.

## Always use AquaTwin tools for deleting asset(s)

For deleting assets, always use AquaTwin tools. Whether you are deleting an individual asset or performing a batch deletion using an ArcGIS selection, AquaTwin tools are designed to handle these tasks effectively.

## How to edit assets using ArcGIS editing tools?

The ArcGIS Pro editing toolbar (Figure 3) contains many editing tool shortcuts.

Here is a link to an overview of ArcGIS editing tools: [Editing in ArcGIS Pro—ArcGIS Pro | Documentation](#).

## How to save changes to AquaTwin

Once a change is made using any of the ArcGIS editing tools, it needs to be saved to the AquaTwin database. To do this run the [Update Geometry Data From Map](#) tool.
